

Responsive Web Design

with Tailwind CSS

What does TailwindCSS offer?

Utility Classes

TailwindCSS menyediakan banyak kelas utilitas yang mencakup berbagai gaya dan fungsionalitas.

Just In Time (JIT) Mode

JIT mode memungkinkan developer untuk menambahkan kelas utilitas langsung di dalam kode HTML tanpa harus membuat file CSS terpisah secara manual.

Easy Responsive

Dalam Tailwind CSS, terdapat kelas-kelas utilitas breakpoint yang membantu Anda mengatur tampilan elemen sesuai dengan ukuran layar yang berbeda.

INSTALLING GUIDE

Install tailwindcss via npm

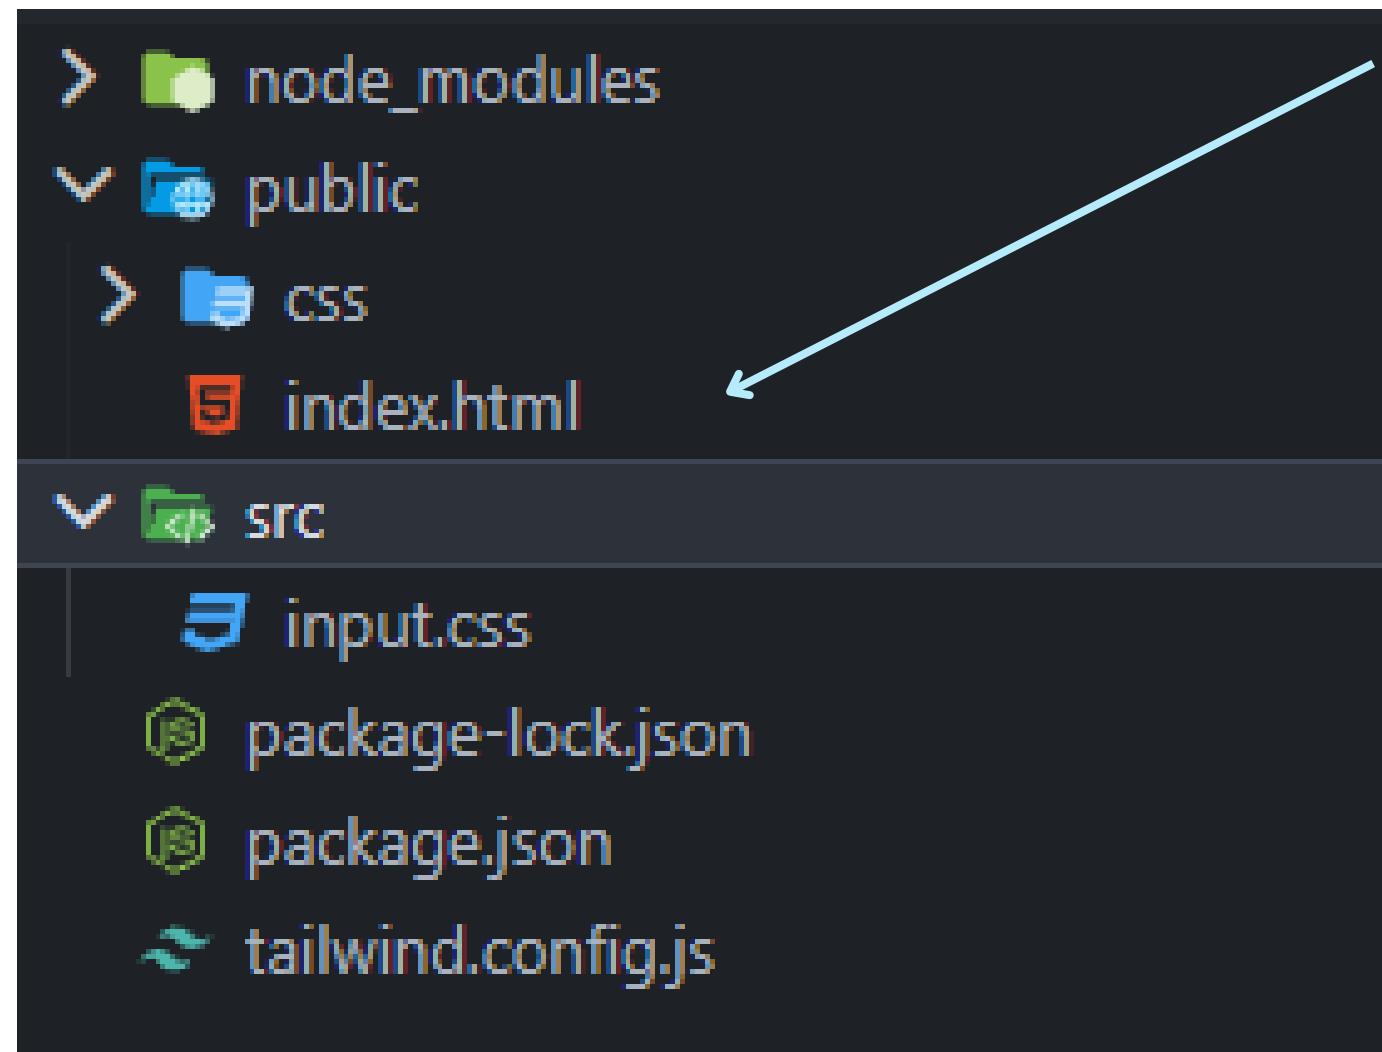

```
npm install -D tailwindcss
```

Initiate Tailwindcss

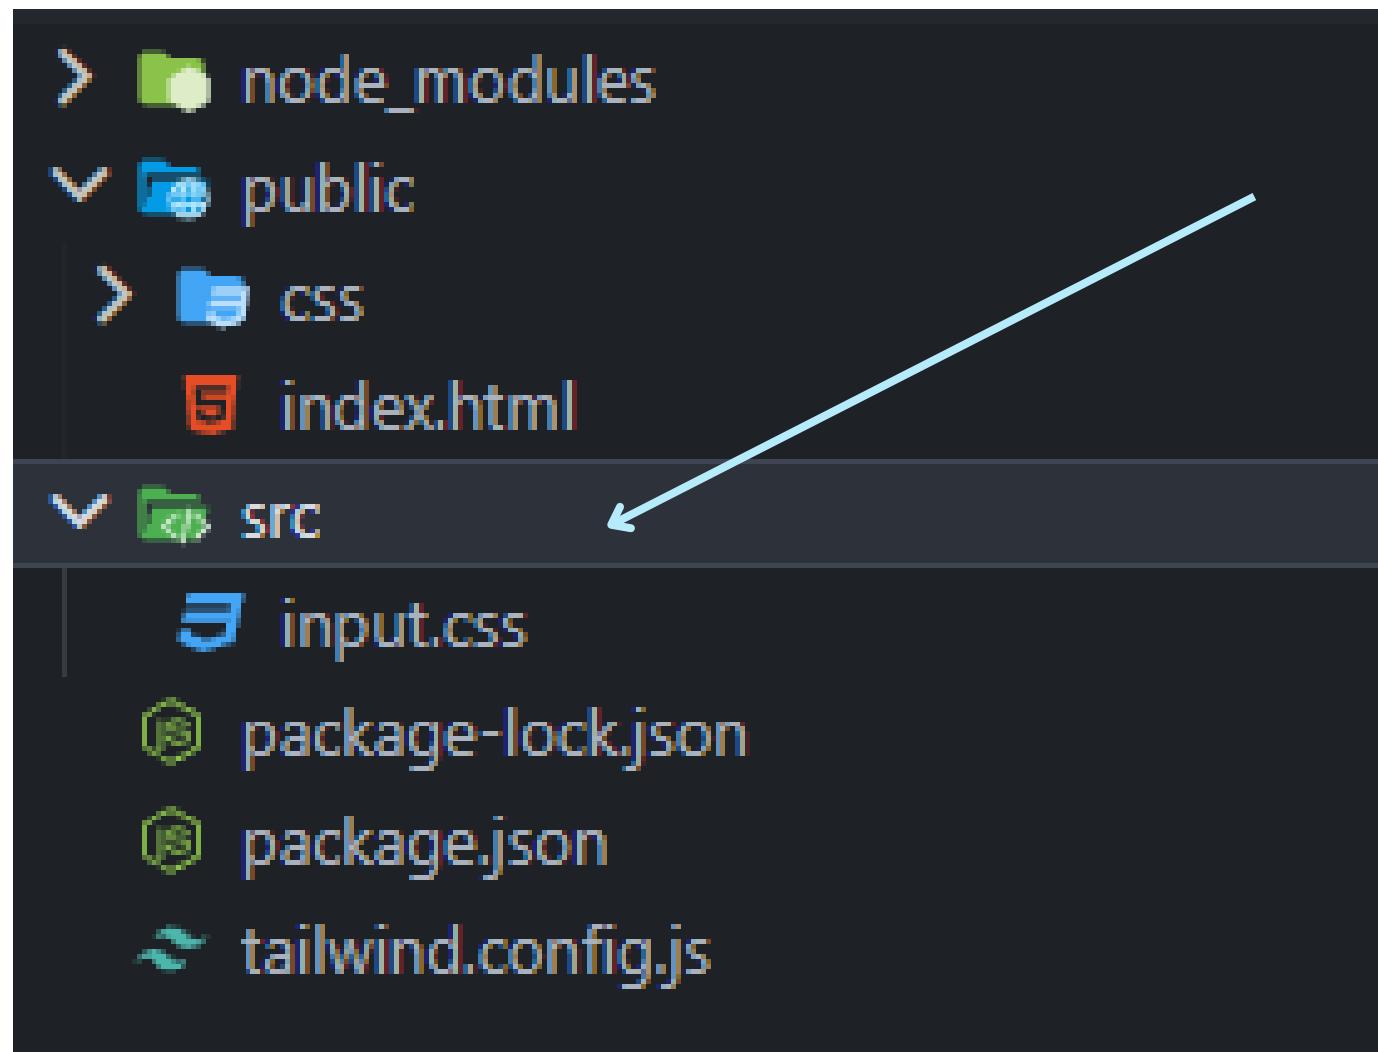

```
npx tailwindcss init
```

Configure your template paths

```
/* @type {import('tailwindcss').Config} */
module.exports = {
  //your template goes here
  content: ['./public/**/*.{html,js}'],
  theme: {
    extend: {},
  },
  plugins: [],
}
```

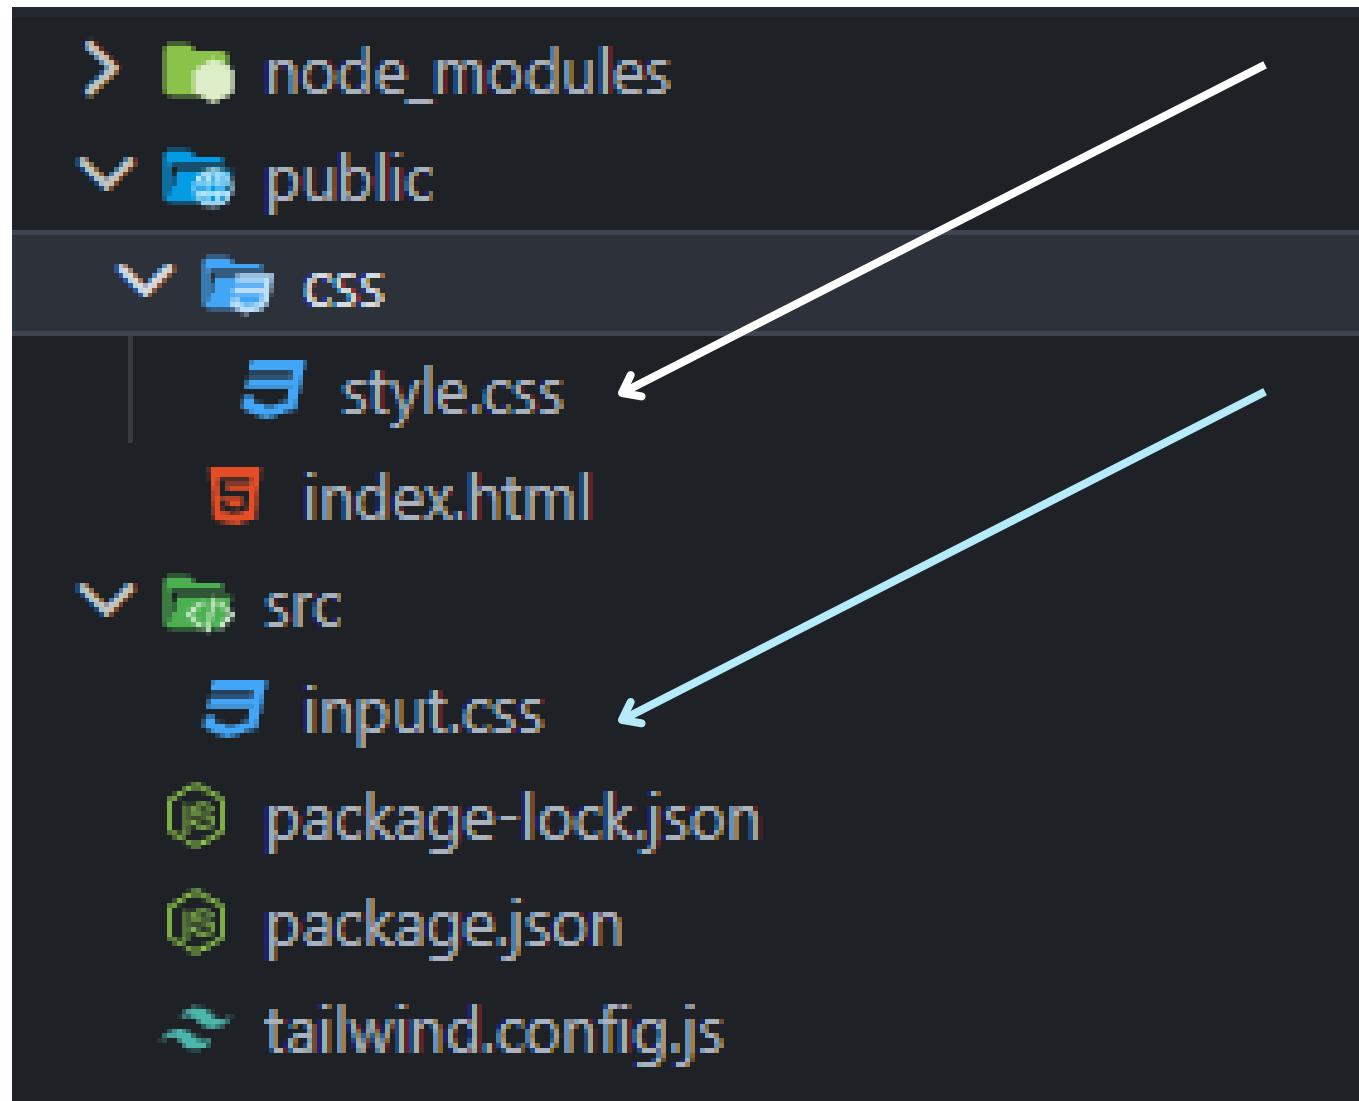

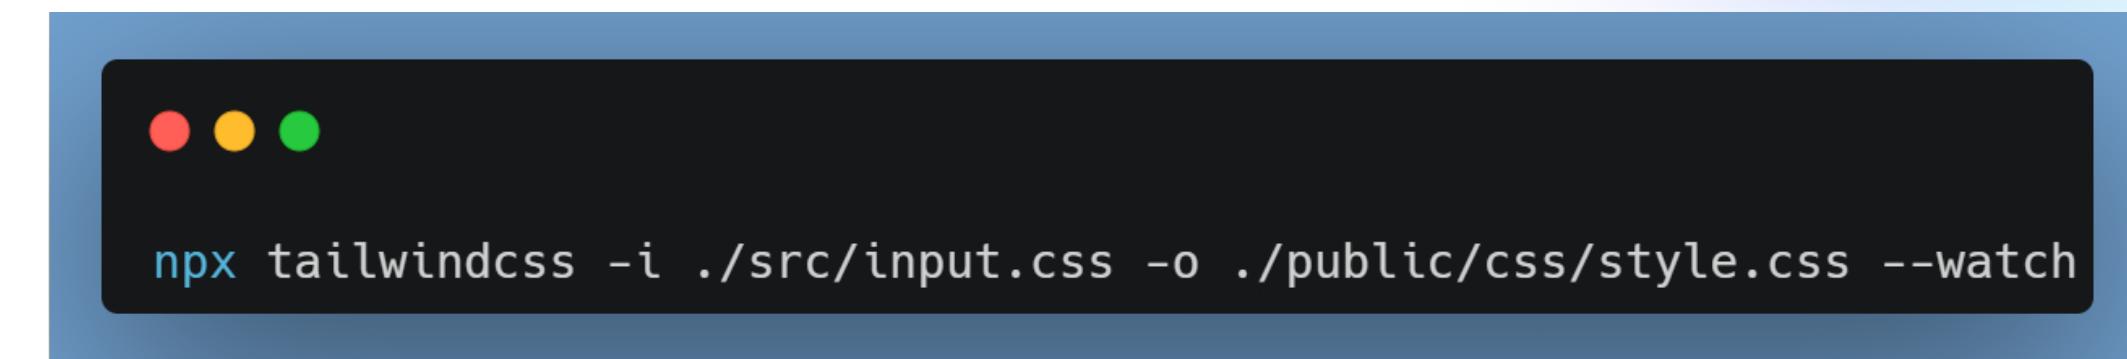

Add the Tailwind directives to your CSS

```
● ● ●  
 @tailwind base;  
 @tailwind components;  
 @tailwind utilities;
```

Start the Tailwind CLI build

process

Responsive Guide

- **Mobile First**
- **Avoid absolute point**
- **Use Flex and Grid**
- **Prefer padding to margin**
- **Customize your utility**
